Mastering BPA (Business Process Analysis)
PIK721-0726 SWT-G-1

If you can't train them, you can't blame them!

Short Description:

COURSE OVERVIEW The Business Process Analysis (BPA) training program equips participants with essential knowledge and skills necessary for analysing, streamlining, and optimising business processes. This program focuses on various BPA methodologies and tools, enabling participants to systematically evaluate existing processes. By understanding the intricacies of these methodologies, individuals can identify inefficiencies and areas for improvement, laying the groundwork for enhanced operational effectiveness. Furthermore, mastering BPA techniques empowers participants to drive operational excellence within their organisations. As they apply their newly acquired skills, they contribute to the overall enhancement of business performance. This training program not only fosters an analytical mindset, but also encourages participants to implement strategic changes that can lead to significant improvements in productivity and efficiency, ultimately benefiting the organisation as a whole.

Course Overview:

COURSE OBJECTIVES

At the end of this program, participants will be able to:

- Create process flowcharts, SWOT analyses, organisational charts, and scoring matrices.
- Recognise various visual modelling techniques.
- Develop both technical and business visual models.
- Understand the importance of recognising and modelling existing business processes for organisational success.
- Measure and document business procedures effectively.
- Conduct thorough analyses and make informed decisions on alternative recommendations.
- Support recommendations with solid evidence and rationale.

Target Audience

- Quality Managers and Quality Engineers.
- Business Process Owners.
- Process Improvement Managers.
- System Implementers and Coordinators.
- Management Representatives.
- Change Managers.
- Improvement Teams.
